📁 Portfolio

Summary

Software Engineer with **4 years of experience** designing and building **secure, scalable microservices** and **cloud-native applications** using **Java, Spring Boot, Angular, React**. Strong experience in **system design, API development, authentication systems, and distributed architectures**. Hands-on expertise in **AWS cloud, CI/CD pipelines, production issue resolution, and high-availability systems**.

Education

Indian Institute Of Information Technology, Dharwad

Bachelor of Technology in Computer Science Engineering

August 2018 - May 2022

Karnataka, India

Technical Skills

Languages: Java, Python, SQL, JavaScript

Backend: Spring Boot, Spring Security, Microservices, REST APIs, GraphQL

Frontend: Angular, React

Databases: MySQL, PostgreSQL, MongoDB, Elasticsearch

Cloud & DevOps: AWS (EC2, S3, RDS, WAF, SES, SNS), Docker, Kubernetes, Jenkins

Messaging & Security: Kafka, SQS, OAuth2, JWT, Keycloak

Practices: System Design, Unit Testing, CI/CD, Agile, Code Reviews, Production Debugging

Experience

Publicis Sapient

Feb 2025 – Present

Associate Software Development Engineer II

Hyderabad, India

- Designed and implemented **CAPTCHA generation and server-side validation**, reducing automated bot registrations by **9%** and improving portal security.
- Implemented AWS WAF rate-limiting and security controls, reducing malicious API traffic by **11%**.
- Integrated **AWS SQS** for asynchronous inter-microservice logging, reducing synchronous API response time by **30%** and improving fault tolerance.
- Architected a **micro-frontend authentication platform** supporting **OAuth2/JWT, 2FA, email verification, and RBAC**, designed to scale for **millions of users**, deployed on **Kubernetes** with zero-downtime rolling deployments.
- Improved authentication service availability to **99.9%+** by implementing health checks, autoscaling, and container orchestration best practices.

W3 Global

Jan 2023 – Jan 2025

Java Developer

Hyderabad, India

- Developed and scaled backend microservices using **Java Spring Boot** for a staffing platform serving **10,000+ recruiters**, handling high-volume candidate workflows.
- Built and optimized **high-performance REST APIs**, improving response time by **25%** through query optimization and efficient concurrency handling.
- Led R&D initiative to implement an **automated bounced-email management system** using **AWS SNS + Java SMTP**, preventing resends to **80,000+ invalid email addresses** and restoring AWS SNS compliance.
- Implemented **SMS and Email opt-out compliance systems**, ensuring adherence to communication regulations and reducing legal risk exposure.
- Developed event-driven workflows using **Apache Kafka**, building producers and consumers to process real-time updates and reduce system coupling.

- As a Backend Developer at FIS Global worked for WorldPay Payment Gateway in the financial services sector using **Java Spring Boot**, contributing to robust and scalable solutions by following **Microservices Architecture**.
- Contributed to the development and integration of **React** frontend for banking solutions.
- Created **CI/CD** pipelines on **Jenkins** and deployed on **AWS**.

Projects

Timesheets Microservices | *Java, Spring Boot, Kafka, Cron Job, Key CLoak, AWS, Microservices, Docker, Elasticsearch, Spring Security, SonarQube, Angular*

- For any Company After onboarding a candidate, effective timesheet management is crucial for seamless payroll processing. I have designed and implemented two end-to-end microservices to streamline this process: the **Timesheet Review Service** and the **Timesheet Submission Service**.
- The **Timesheet Review Service** automates weekly timesheet initiation with a **cron job**, manages employee authentication via **Keycloak**, and implements complex business logic for accurate payroll calculations.
- The **Timesheet Submission Service** enables employees to submit their timesheets and track payroll in real time. This architecture enhances operational efficiency and ensures precise payroll processing.

Email Unsubscription | *AWS mail, Java smtp, Spring Boot, Angular, AWS, Jenkins, Kafka*

- This feature empowers users to manage their subscription preferences effortlessly, allowing them to opt in or out of email communications at any time.
- As part of this solution, we included a clickable unsubscribe link in our emails, enabling users to unsubscribe with a simple click. Upon clicking the link, users are promptly unsubscribed from further communications, enhancing transparency and user control.

Bounced Emails Management | *AWS SNS, Java-SMTP, Spring boot, SonarQube, ElasticSearch*

- In a pivotal project, I addressed a critical issue users encountered during broadcasting via AWS SNS (Simple Notification Service). Due to a high bounce rate exceeding 8%, AWS suspended SNS operations.
- To mitigate this, I devised an Automated Mail Parsing solution. By interfacing with AWS SNS, it identifies and flags bounced emails, preventing resending to invalid addresses. This implementation successfully bounced 80,000 emails in production, ensuring efficient email delivery and system stability.

SMS Unsubscription | *Ring Central, Java Spring Boot, Webhooks, Microservices*

- Our company encountered significant legal compliance challenges due to the absence of an SMS opt-out mechanism, resulting in users being unable to unsubscribe from broadcasted SMS.
- To rectify this, I led the implementation of an SMS opt-out feature, allowing users to autonomously discontinue receiving SMS broadcasts at any time. It is in production, ensuring efficient email delivery and system stability.

Certification/Trainings

- Java Certified by HackerRank
- Angular Certified by LinkedIn
- Reactjs Certified by LinkedIn
- HTML, CSS and JavaScript for Web Developers by Coursera
- Python for Data Science, AI Development by IBM

Hobbies

- Playing Badminton
- Reading Books
